

Main problems encountered:

Many tasks were not completed

This week we had a very ambitious sprint plan, but we underestimated how much time it would take to do everything. We also received feedback that was we decided to prioritise over some things on the original sprint plan.

This week we created a few new unit tests, but way less than we wanted. This was both due to lack of time and again, priority changes.

Adjustments:

We have moved some tasks from last week over to this week. This includes unit testing. Additionally we simply have to admit the fact that we will probably not be able to do all the things we plan for, simply due to the fact that these last weeks are on crunch time and we simply cannot anticipate some of the things that force us to change our planning.
