Main problems encountered:

Planning Failure

During our sprint planning we did not account properly for the various events that were planned for this week such as the demo on wednesday, the meeting on friday as well as the various exams. This meant that we planned for various tasks that we did not have enough time for at all in hindsight.

Refactoring

We realised during the sprints that we would not be able to add the features that we had planned without refactoring a big part of our project. Both in terms of checkstyle, PMD and findbugs errors as well as architectural refactoring.

Adjustments:

In our next sprint plan we will allocate time for refactoring to ensure that we won't have to spend unaccounted for time on it. We will also plan for the scheduled events for the same reason.
